1. Introduction

FIRE SYSTEM SERVICES continually seek to reduce its impact on the environment in terms of our organisational context.

It is the intent of this procedure to effectively manage the following risks associated with specific works:

- Excessive noise exposure
- Air quality
- Contamination of drains and waterways
- Waste management

This procedure details the relevant activities to ensure that all potential environmental impacts are identified and controlled to meet company and legislative requirements.

Control of site-specific operations will be managed through the development of SWEMS/JSEAs with all operations complying with our legal obligations.

2. Scope

This procedure is applicable to all workplaces where FIRE SYSTEM SERVICES conduct work activities. When employees are performing work on a client site that has their own environmental procedure, this FIRE SYSTEM SERVICES procedure shall provide minimum requirements for performing tasks.

3. Referenced Documents

Document Title	Description
Policy	FIRE SYSTEM SERVICES Environmental policy
Management Plan	FIRE SYSTEM SERVICES QHSE Integrated Management Plan
Procedure	• Subcontractor and Supplier Management • Incident Management • Hazard Identification, Risk Assessment and Control
Form or Document	• Incident Report and Investigation Form • Emergency Drill Record
Register	• Risk Register • Continuous Improvement Register • Business Performance Register • Chemical Register • Incident Register

Regular monitoring, evaluation and reporting are key features of FIRE SYSTEM SERVICES's Environmental plan, to ensure that it remains compliant with regulations and legislation. This is essential for:

- understanding the success or failure of any interventions made within the business
